

What is the best way to measure and set individual and team goals?

Group goal setting is **cooperative** rather than competitive. Goals are set by teams by adding up what each team member feels or estimates is a reasonable challenge for them personally.

Team goals for physical activity are typically set between 480 and 960 miles.

- The 480 miles level is considered a minimum for a six-person adult team. 480 miles translates to 30 minutes of moderate-intensity activity, five days a week for each of 6 team members during the 8-week program.
 - At this level, each person would need to contribute an average of 80 miles over the 8 weeks (10 miles per week).
 - If a team has only five members, then a Team Goal could be set by subtracting 80 from 480. Each team will be different.
-
- If a team wants to strive for doing an hour of moderately intense physical activity at least 5 days a week (20 miles per team member each week), then the Team Goal would be set at 960 miles.
 - Teams can also set their goal for team miles at some level between 480 and 960.
-
- If a team has one or more children participating, it is appropriate to encourage the child to do 60 minutes, five days a week since this is the current recommendation for children.

The suggested team goal for fruits and vegetables is about 1600 for the 8-week program period for a team of six adults.

- Per team member, this equates to 280 cups over the 8 weeks, or 5 cups a day, every day.
- If there are only five members on a team, subtract 280 from 1600 to arrive at a Team Goal for fruits and veggies.
